

Bike Treatments

Is this area amenable to biking (demand side/geographic factors)?

- Higher density area type
- Land use – Residential/ Commercial Primarily
- High Bike/Ped Suitability Score

YES

If biking is allowed, is the roadway amenable to biking (supply side/risk/asset factors)?

- Bicycle Level of Traffic Stress (1-4), consisting of:
 - Lanes
 - Speed
 - Volume

LOW

MED

Bike lanes already exist?

YES

Maintenance and enhancement strategies

NO

Add at a minimum striped bike lanes

Bike lanes already exist?

YES

Upgrade to protected bike lanes

NO

Find parallel route or create off street bike path

Is there high bike crash frequency and/or severity on segments or at intersections?

YES
(Segments)

YES
(Intersections)

Intersection bike/ped safety countermeasures

Pedestrian Treatments

Is this area amenable to walking (demand side/geographic factors)?

- Higher density area type
- Land use – Residential/Commercial primarily
- High Bike/Ped Suitability Score
- Transit routes

YES

Is the roadway amenable to walking (supply side/risk/asset factors)?

- Pedestrian Level of Traffic Stress, consisting of:
 - Lanes
 - Speed
 - Volume

LOW

MED/HIGH

Ped infrastructure already exists?

YES

Maintenance and enhancement strategies

NO

Sidewalks and marked crossings

Ped infrastructure already exists?

YES

Curb extensions, ped activated crossings, buffers, islands

NO

Sidewalks and marked crossings; consider shared use path

Is there high bike crash frequency and/or severity on segments or at intersections?

YES
(Segments)

YES
(Intersections)

Intersection bike/ped safety measures

Transit

Is this area amenable to transit (demand side)?

- Higher density area type
- Land use
- High Transit Propensity Index

YES

Is this a high volume, congested corridor amenable to mode shift?

- High AADT
- Low Travel Time Reliability
- Numerous Bottlenecks

YES

Is there existing fixed route service?

YES

Increased service

NO

New route or route extension

YES

Are there wide shoulders or more than 2 lanes?

YES

Exclusive bus lane or bus on shoulder

Passenger Rail

Is this a high-volume, congested corridor carrying long-distance trips?

- High AADT
- Low Travel Time Reliability
- Numerous Bottlenecks
- High long-distance trip %

YES

Existing Amtrak/NICTD service parallel to corridor?

YES - Consider:

Increased Service

Additional Station

NO

Existing freight rail parallel to corridor?

YES - Consider:

New Service

Freight Rail

Is this a high truck volume, congested corridor carrying long-distance trips?

- High truck AADT
- Low Travel Time Reliability
- Numerous Bottlenecks
- High long distance trip %

YES

Existing freight rail parallel to corridor?

YES

Do truck ODs for corridor align with freight rail extents?

YES - Consider:

Support freight rail improvements in corridor (refer to SRP and Freight Plan)

Alternative Fuels/EVs

Are there gaps in existing
chargers along proposed
EV network?

YES

Additional EV
chargers

Other Carbon Reduction Strategies

Are there high vehicle emissions in this corridor?

- Segment-level emissions calculated based on:
 - Vehicle volumes and mix
 - Speeds
 - Roadway and area type

YES

Is reliability also an issue in this corridor, and is speed driving the emissions levels?

YES - Consider:

Adjusting posted speeds

Intersection treatments (e.g., roundabouts)

NO –
Consider:

Fleet electrification, other policies – **consistent with IN Carbon Reduction Strategy**
